

from Trash to TREASURE

#qualityXsustainability
#EthicalManufactureXConsciousDesign

Recycled polyester material is a sustainable choice where quality and pleasure become meaningful. Compare to the process of making virgin polyester, it save 50% of energy and resources through recycling and reproducing yet the quality stays the same. All the recycled bottle are melted into chips and pellets, then turned into 100% high quality recycled filaments without using anymore natural resources.

Feature

- 50% energy and resource save
- Reduce post-use plastic pollution in the landfill and the ocean
- All product are GRS certified
